```
6   MyTime::~MyTime()
7   {
8       std::cout<<"end of the object. Space Deleted.\n";
9   }
0   void MyTime::displayTime()
1   {
2       std::cout<<"The time is: hour: "<<hour<<"   The min is:  "<<min<<".\n";
3   }
4
```

The deconstructor is called, this is because when running the code you know see in the end of the terminal it is printed the "end of object. Space Deleted' 5 times.
